SOUNDPROOFING

Nook is intentionally open on one side. This openness combats the claustrophobia, staleness of air and overheating that enclosed pods encounter.

Nook balances this openness and approachability with a surprising quietness once inside. Users have called it 'an oasis of calm. It is a feeling of intimacy and peace which delights and promotes focus, as Nook users will attest.

MOBILITY

Nooks' heavy-duty lockable castors ensure 1-2 people can move a Nook easily. This portability, coupled with how Nooks work together, enables hyper-agile environments.
